Largest divergence count for each model in each vignette

Each cell shows the maximum across fitted calls or group levels using that model; numbers are actual counts.

Divergences: Not fitted; 0; 1–10; 11–100; 101–1,000; >1,000

A dash means the model did not fit in that arm. Repeated fits are not added in this figure; see diagnostics.csv for every candidate.
